

Dinosaur Design Challenge

Miss Flitcroft adores dinosaurs and the Stegosaurus is definitely one of her favourites. She grew up on a little island in the south of England called the Isle of Wight and it's famous for dinosaur fossils. This is a photograph of a dinosaur footprint she found whilst walking along her local beach. The footprint has been made from an imprint cast in the ground millions of years ago by a dinosaur. She has always wondered what that dinosaur would have looked like. How big was it? Look for the clue in the picture (these are her feet). Did it have a long neck? How many legs did it have? Did it have sharp teeth or round teeth? Could it fly? What do you think the dinosaur looked like? Could you draw it below?
